# 1. GENERAL INFORMATION

2

## 1.1 APPLICATIONS

EBH high pressure ducted fan coils are specifically designed for ducted installations, with external static pressure up to 350 Pa. Their high pressure fan decks permit to satisfy every request of heating and cooling application in big environments.

3

## 1.2 OPERATION

The effectiveness of a fan coil is due to the large surface area of the finned heat exchanger (coil) where the air drawn from the room by the fan passes through.

Heating operation: the hot water circulating in the finned coil supplies heat to the air passing through the heat exchanger.

Cooling operation: the chilled water circulating in the finned coil removes heat from the air passing through the heat exchanger. The air is also dehumidified and the condensed water vapour must be discharged from the unit: suitable drains must therefore be provided to drain the condensed water that collects in the condensate tray.

4

5

## 1.3 PERFORMANCES

6

The performance of a fan coil can vary greatly with changes in the temperature and in the amount of water circulating through the coil, as well as with changes in the temperature and in the amount of air circulating through the coil.

The air volume is determined by selecting the proper fan speed through electronic or digital regulators (also for BMS systems), while the water flow rate is determined by the specifications of the system and of the pump.

7

Thermal performances of the unit can be optimized by controlling the inlet flow rate of the water with proper regulating valves (ON/OFF or modulating), which can be supplied as accessories and which are necessary in case of cooling operation.

8

For each model, thermal performances in heating and cooling depend on the number of rows of the coil installed, which gives the opportunity to make the air treatment suit every condition required.

9

In cooling function, under the same operating conditions, the more rows the heat exchanger has, the more it will dehumidify.

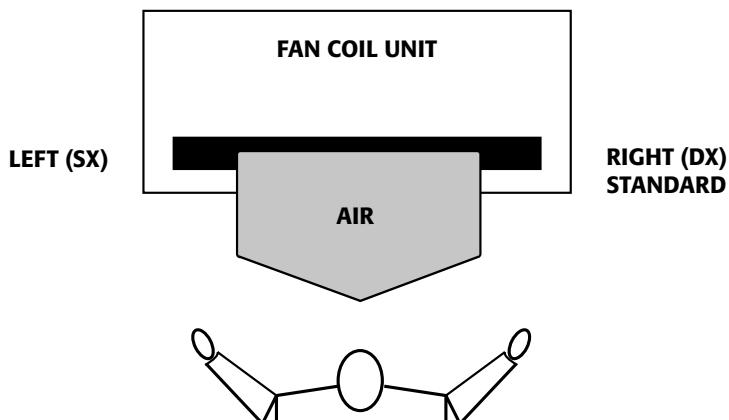

## 1.4 PRODUCT RANGE

The EBH high-pressure fan coil units are available in 6 sizes (020÷070) for concealed horizontal installation, in 2 and 4 pipe systems.

## 1.5 SELECTION SOFTWARE

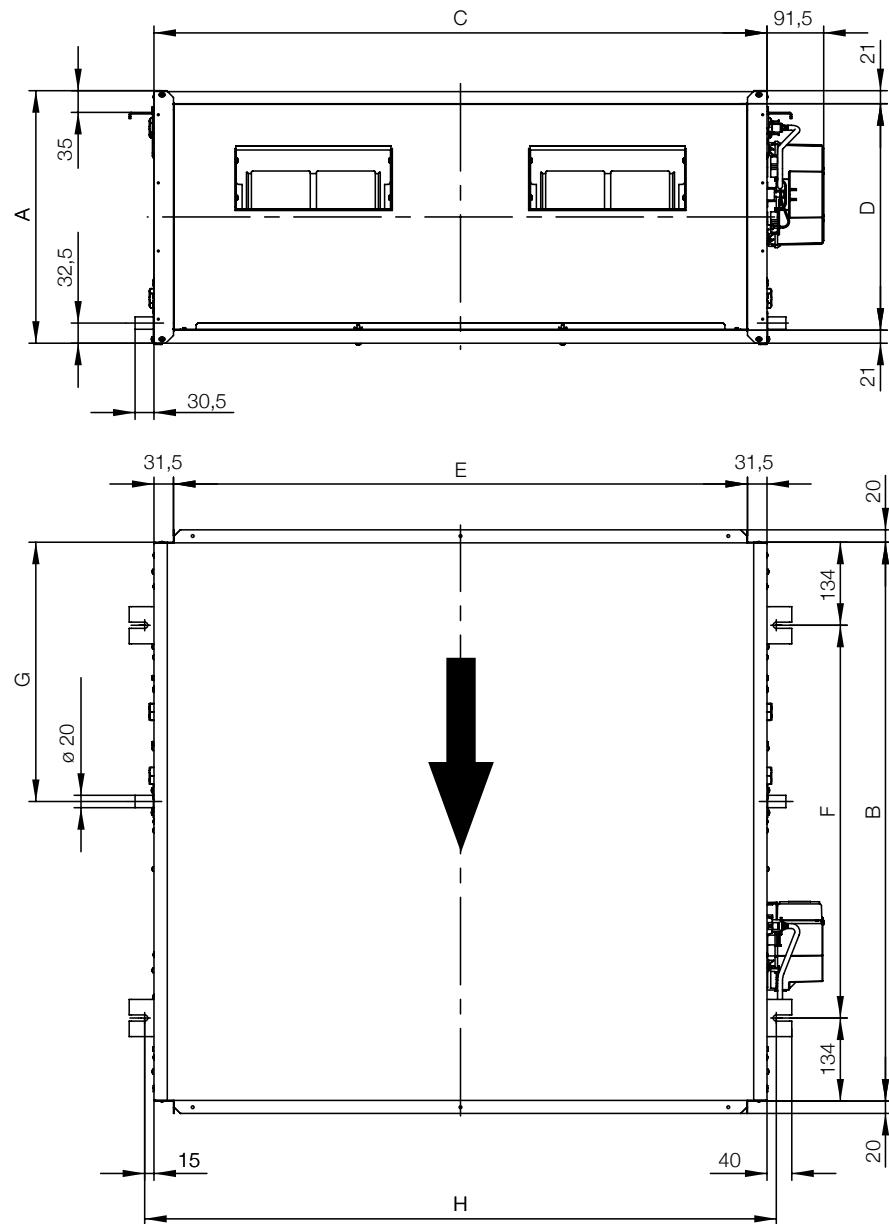

To facilitate choosing the correct size of a fan coil for any operating condition (including those differing from the standard ones), EURAPO offers a dedicated computer program that can be downloaded from the ftp address <https://www.geniusplan.it>.

## 1.6 WATER CONNECTIONS

## 2. DIMENSIONS AND WEIGHTS

## 3. COMPONENTS

1

2

3

4

5

6

7

8

9

### 3.1 STRUCTURE

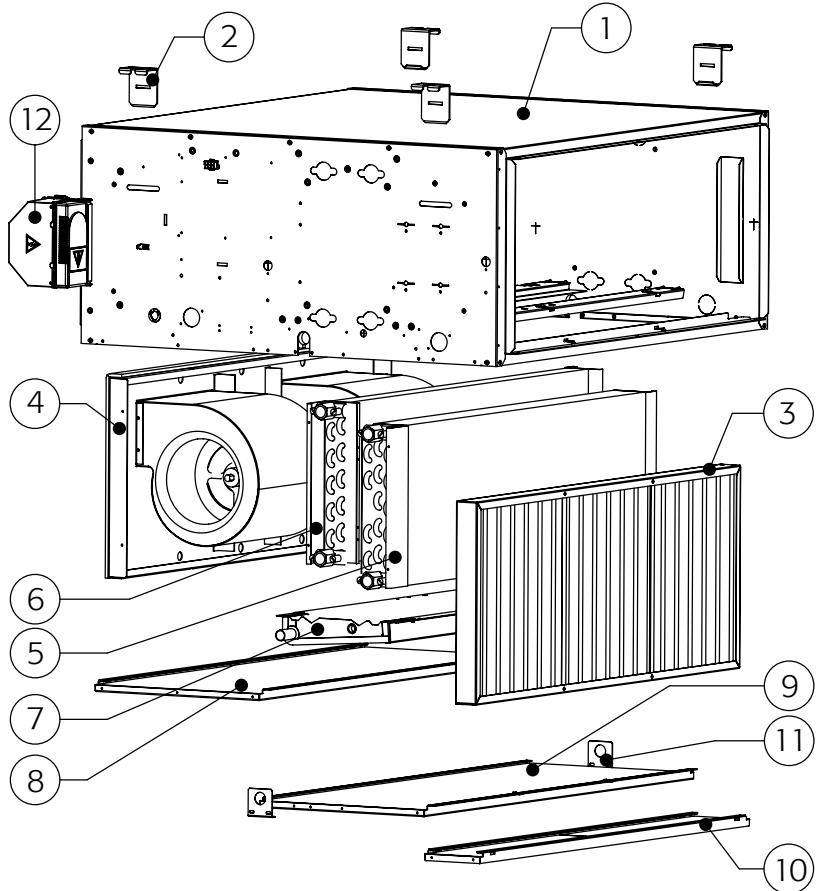

The structure is made of galvanized steel. A particular manufacturing process gives stiffness to the structure: in this way all risks of vibration (which causes unpleasant noise) are strongly reduced. All the inner elements that could be cooled are completely lined with insulating material based on polyolefin, chemically reticulated and closed cell foam, which is not only a thermal insulation material but also a good sound attenuator. Self-extinguishing grade in accordance to norms: Class 1 - Italy, Class M1 - France UNI 8457 and UNI 9174.

In order to facilitate all maintenance operations, the structure is divided in 3 separate and independent sections:

- Fan deck
- Condensate tray
- Filter

The air intake and outlet are provided with a 21 mm flange for an easy connection to the air duct.

The EBH fan coils can be installed on the ceiling by using the four fixing brackets always supplied with every unit.

### 3.2 COILS

For each unit size there are 2, 3 and 4 row coils available; for 4 pipe systems it is possible to install a 2 or 3 row coil. It is therefore possible to have a combination of maximum 7 rows (4 row cooling + 3 row heating). For models 060 and 070 are also 5 row coils available, which can be combined with additional 2 or 3 row coils.

All coils consist of 3/8" external diameter copper pipes mechanically expanded to the aluminium fin packs, provided with copper headers and brass soldering connections.

Max. operating pressure 1,6 MPa, testing pressure 2,8 MPa.

For the sizes 020, 030, 040 e 050 each header is provided with a very handy air valve, to allow air venting or water drainage from the coil. The air valve can be easily reached from the outside of the unit.

For the sizes 060 and 070 the air vent valve are not present, therefore it is necessary to provide in the pipe connection a system for the water discharge and air venting of the coil.

EBH units are also available for **District Cooling** applications: the water coils (4 rows for size 020-050 and 5 rows for size 060) are designed with a reduced number of circuits, suitable for functioning with high water temperature difference.

EBH units can be ordered with right (standard) or left water connections, so defined when facing the air outlet. If necessary, however the coils can be easily removed and reversed on site.

Water connections are 1/2" F (female threaded) for sizes 020, 030, 040, 050 and 1" M (male threaded) for size 060 and 070.

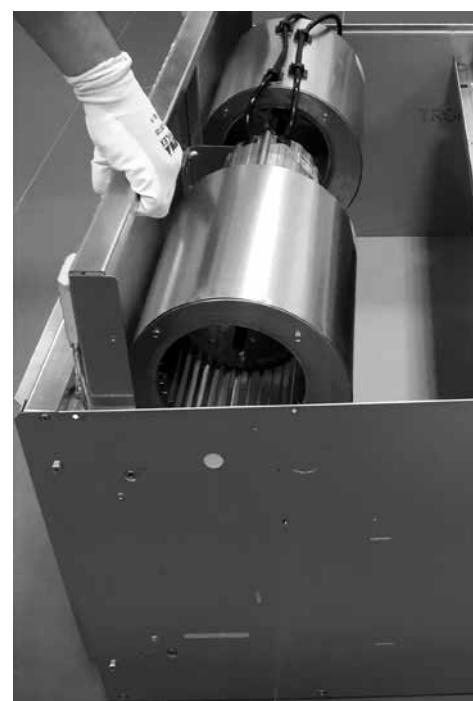

**MAXIMUM OPERATING PRESSURE WITH VALVES: 16 BAR.**

### 3.3 FAN DECK

The fan deck is composed by a 3 speed motor and 2 centrifugal galvanized steel scrolls. The motor and the scrolls are fixed on a rigid galvanized steel 1,5 mm thick basement: the motor is located in a proper cradle and fixed with elastic ribbon supports. All motors are provided with permanently connected capacitor and thermal protection of the windings with automatic recharge; single phase 50/60 Hz for sizes 020, 030, 040, 050, 060 and 070 (for the functioning at 60 Hz please verify with the Europa staff). For all sizes the power supply is 230V± 6%.

Each fan assembly is dynamically balanced, to reduce noise and wear of the components to minimum levels; it can easily be removed for maintenance operation.

2

3

4

5

6

7

8

9

### 3.4 CONDENSATE TRAY

1

The condensate tray is made of galvanized steel and it is completely insulated by a 12 mm thick closed cell polyurethane foam layer. The condensed water is discharged from both sides (left or right) through a 20 mm diameter header. Stainless Steel (AISI 316) condensate tray is also available upon request.

2

### 3.5 AIR FILTER

3

The air filter consists of a polyester acrylic fibre, filtration class G3. A filter with higher filtering grade (F5) is also available upon request for each model.

4

The particular pleated shape of the filter, protected by a metal frame, allows having a big filtering surface with only 45 mm thickness. The filter section can be easily removed for cleaning and maintenance operation. Filters are not washable.

5

### 3.6 STANDARD ELECTRICAL PANEL IP30

6

All models are provided with a terminal board with screw terminals contained in a self-extinguishing (class VO) plastic box (IP30). CBL00 is the standard electrical panel for sizes 020÷030.

7

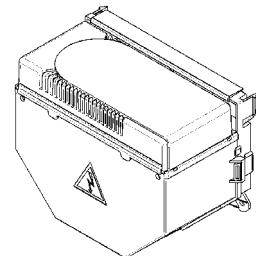

For sizes 040÷070 a supporting relay is installed as standard on the electrical panel, where the power supply must be connected (CBL20).

8

The electric box must be fixed on the pre-arranged position on the side of the EBH unit and connected with a «plug and play» system to the plug already present on the side itself.

9

Every EBH model is supplied with an electric wiring diagram showing all the electrical components, accessories factory fitted and/or remote controllers ordered together with the unit. Everything must be correctly wired in accordance to the diagram, to obtain the requested working conditions of the unit.

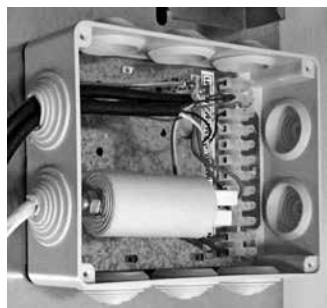

Standard electrical panel  
CBL00 - CBL20

### 3.6.1 OPTIONAL ELECTRICAL PANEL IP44 (GW00-GW20)

10

Electrical panel composed by a terminal board with screw terminals contained in a high protection box (IP44). Available on request. GW00 is the basic box for sizes 020÷030; GW20 is the basic box for sizes 040÷070 where a supporting relay for the motor is installed.

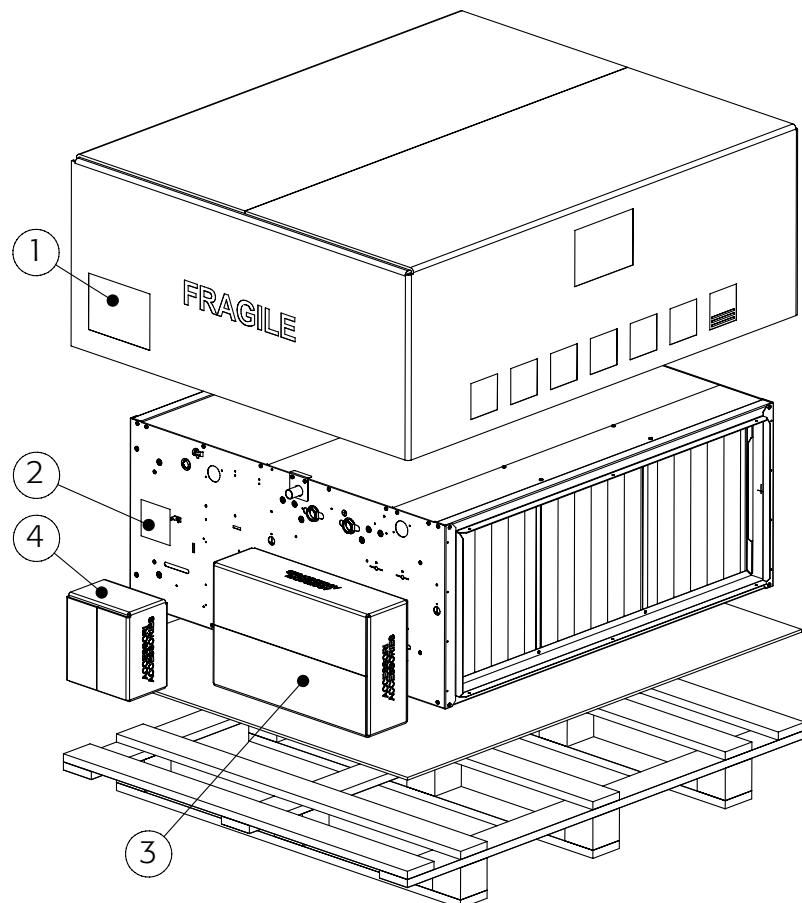

GW00

GW20

### 3.7 PACKING

Every unit is packed in a carton box and lays on a wooden pallet. Available fumigated (SPM15-IPPC) pallets as optional.

#### LEGEND

8

9

## 1 4. ELECTRICAL ACCESSORIES

### 2 4.1 ELECTRIC BOX CBL10

3 Self-extinguishing plastic box (class V0), which contains a 12 pole terminal board and a double insulated transformer (230/24 V~10 VA), for the electrical connection of the modulating valves. It is supplied as standard for sizes 020 and 030 when the regulators CER10/B and CER30/B are requested.

### 4 4.2 ELECTRIC BOX CBL20

5 Self-extinguishing plastic box (class V0), which contains a 12 pole terminal board and a power relay card (230V): this card is requested either when an electric heater is mounted on the fancoil unit or to control the fan speeds in Master/Slave configuration. It can be combined with the following regulators: CMR00, CERO0, CER20 and OMNIBUS. It is always supplied as standard for units size 040-070.

### 6 4.3 ELECTRIC BOX CBL30

7 Self-extinguishing plastic box (class V0), which contains a 12 pole terminal board, a double insulated transformer (230/24 V~10 VA) for the electrical connection of the modulating valves and/or 24V controls, a power relay card (24V), which is requested to control the fan speeds in Master/Slave configuration. It can be combined with the following regulators: CER11, CER31, CERO0, and CER20 (with power supply 24V).

8 It is always supplied as standard for units size 040 and 070 when ordering the CER11 or CER31 controls.

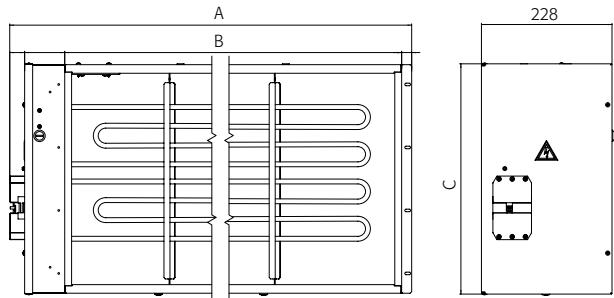

**9 EURAPO recommend to use also on sizes 020 and 030 the CBL30 electric box every time that modulating valves are installed.**

### 8 4.4 ELECTRIC HEATER - KREL

9 Additional module for electric heater supplied with 2 safety thermostats, one with automatic resetting and the other one with manual resetting, a power relay card and a terminal board for the electrical connection.

The table shows the power of the electric heater for each unit size.

EBH	P [kW]	P/S [V-ph-Hz]	A	B	C
020	3,0	230-1-50/60	1068,1	954,6	402,1
030					
040	6,0	380-3-50/60	1318,1	1204,6	
050					
060	9,0	380-3-50/60	1713,1	1599,6	512,1
070					

### 4.5 FAN SPEED SELECTOR - CSR

This selector has no room thermostat and it can control the 3 fan speed only. The speed selector does not control any valve: a remote thermostat (TAD10) is requested in order to control the ON/OFF valves, in case.

CSR00

### 4.6 ROOM TEMPERATURE THERMOSTAT - TAD10

Room temperature thermostat for wall installation with manual selection of the working mode (Summer/Winter changeover) and set point regulation of the room temperature.

## 4.7 THERMOSTATS - CMR

Room temperature thermostats with manual fan speed selector and Summer/Winter switch. The comfort temperature zone (20-25 °C) is marked around the knob. It is also possible to limit the temperature setting range.

CMR00

CER00

## 4.8 ELECTRONIC REGULATORS - CER

The EURAPO electronic controllers with microprocessor offer a wide range of functions for the fancoil regulation; they are provided with the comfort temperature zone (20-25 °C) and with the opportunity to limit the temperature setting range. These regulators can also provide the following functions: automatic fan speed and automatic S/W changeover.

EURAPO REGULATORS

For more information please refer to the TECHNICAL MANUAL FOR EURAPO CONTROLLERS.

## 4.9 OMNIBUS DIGITAL CONTROL

The OMNIBUS digital control system permits a complete and integrated management of several fancoil units installed in the same building. It is designed either for a stand-alone operating mode, or to be integrated, at different levels, to a centralized Building Automation System, with a serial communication protocol RS-485 (Modbus RTU). The digital regulator can control many fancoils at the same time (Master/Slave solution), which are connected together by two twisted wires (AWG 24).

### 4.9.1 POWER OMNIBUS CARD for BMS - OPT10

The Power Omnibus card mounted on the unit is designed to fully regulate (directly or via Modbus) the water terminal units.

The card can provide:

- 6 ON/OFF outputs: Fan speed Minimum-Medium-Maximum; Electric heater/ Dehumidification; Hot water valve, Cold water valve
  - 3 Analogue 0-10V outputs: Heating modulating valve, Cooling modulating valve, Auxiliary fan
  - 5 Outputs on the additional multitask card OPT50 (optional): On/off heating valve 24V; On/off cooling valve 24V; Auxiliary fan for fresh air and/or free cooling; Alarm contact; External air damper
  - 5 Analogue inputs: Room temperature sensor (AS), Water sensor (WS), Air outlet sensor (CS), External air temperature sensor and relative humidity sensor
  - 3 Digital inputs: Economy contact; Window contact; contact for the thermal protection of the motor
  - 2 Serial communication ports (RS485): Network "Local Bus" for the connection of the Console (built-in the unit or for remote installation); Network Modbus for the connection of the Manager Console or other Supervision System (BMS)
- This card is available also without BMS communication (ONT10).

OPT10

### 4.9.2 CONSOLE DISPLAY - OC236

The Console is connected to the Power Omnibus card by a phone cable (4 wires), from which it is energized (15 Vcc) and it receives information from the Local-bus network. The Display Console is provided with four buttons for setting the parameters and the operating modes of the water terminal unit:

- Status: OFF-Comfort-Economy
- Fan: Low, Med, High, Auto
- Mode: Cool-Heat-Fan-Dry
- Room temperature Set-point

The Display Console can be used as "service tool":

- identification by code of possible alarms
- setting or variation of the Modbus address
- visualization of the I/O status

OC236

### 4.9.3 ANALOGUE PLUS CONSOLE - OC736

The Console is connected to the Power Omnibus card by a phone cable (4 wires), from which it is energized (15 Vcc) and it receives information from the Local-bus network. The Analogue Plus Console is composed by:

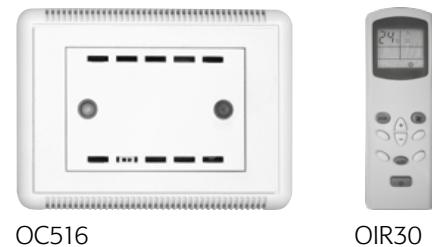

- One LED showing the operating mode and operating status of the Power Omnibus card
- Four LEDs to visualize the fan speed status and warnings, in case
- Two buttons: one for setting the operating mode of the terminal unit (Cooling/Heating) and one for the selection of the fan speed
- Room temperature sensor
- One knob for setting the room temperature set-point value and OFF position

OC736

#### **4.9.4 INFRARED RECEIVER (OC516) AND REMOTE CONTROL (OIR30)**

The end user has the possibility to regulate the fan coil unit through the Infrared remote control (OIR30). The IR receiver is connected to the Power Omnibus card by a flat phone cable from which it takes the power supply (15 Vcc) and by which it exchanges information on the RS485 "Local bus" network. The IR console has a built-in air sensor and one LED showing the Status of the unit (in particular: fixed green: cooling mode; fixed red: heating mode; flashing yellow: alarm or warning status)

OC516

OIR30

## **4.10 OMNIBUS SUPERVISION**

#### **4.10.1 MANAGER CONSOLE - OC436 (up to 10 units)**

- Modbus/RTU protocol
  - Different access levels (user/supervisor/service)
  - Centralized operation
  - Set-up parameters configuration
  - INPUT/OUTPUT status monitoring
  - Daily and weekly program
  - Alarms management

OC436

#### **4.10.2 OTOUCH - OCB30 (up to 100 units)**

- Modbus/RTU protocol
  - Different access levels (user/supervisor/service)
  - Centralized operation
  - Set-up parameters configuration
  - INPUT/OUTPUT status monitoring
  - Daily, weekly and special events program
  - Alarms management
  - 7 inches touch screen
  - Boost function for a period set by the user
  - LAN interface with TCP/IP protocol
  - Suitable for the most common web browsers
  - Remote management via Internet
  - Boiler room management (pumps, boiler, heat pump)
  - Scenarios management
  - Multilanguage

OTOUCH

#### **4.10.3 ONET - OCB50 WEB SERVER (up to 250 units)**

- Modbus/RTU protocol
  - Different access levels (user/supervisor/service)
  - Centralized operation
  - Set-up parameters configuration
  - INPUT/OUTPUT status monitoring
  - Daily, weekly and special events program
  - Alarms management
  - Boost function for a period set by the user
  - Suitable for connecting up to 250 units
  - LAN interface with TCP/IP protocol
  - Suitable for the most common web browsers
  - Remote management via Internet

OCB50

1

**For more information please refer to the TECHNICAL MANUAL FOR OMNIBUS CONTROLLERS.**

2

#### 4.11 AS - AIR SENSOR

1 or 3 m long NTC sensor fixed on the air inlet of the ducted unit.

It is optional, on request, with the following regulators: CMR00, CER00, CER10/B, CER11, CER20, CER30/B, CER31 and OMNIBUS.

3

#### 4.12 CS - CHECK SENSOR

4

1 m long NTC sensor, to be installed on the air outlet of the ducted unit. In combination with OMNIBUS card, it allows highlighting any faults in the functioning of the ducted unit, by reporting an alarm signal.

5

#### 4.13 WS - WATER SENSOR

6

3 m long NTC sensor (10K, 25°C), requested for the automatic S/W switch when a ducted unit is controlled by a regulator with microprocessor or OMNIBUS, in a 2 pipe system, for both heating and cooling operation. The Summer/Winter changeover works as follows:

7

WS combined with CER00, CER20, CER30/B

Summer: water temperature < 17 °C = cooling on  
water temperature > 19 °C = cooling off

Winter: water temperature > 32 °C = valve open  
water temperature < 30 °C = valve closed  
water temperature > 35 °C = fan on  
water temperature < 33 °C = fan off

8

WS combined with CER10/B, CER11, CER31

Summer: water temperature < 11 °C ± 1 K = cooling on  
water temperature > 14 °C ± 1 K = cooling off

Winter: water temperature > 40 °C ± 1 K = heating on  
water temperature < 30 °C ± 1 K = heating off

9

The water sensor is not compatible with 2 way valves (J2B2 or J2C2, for example).

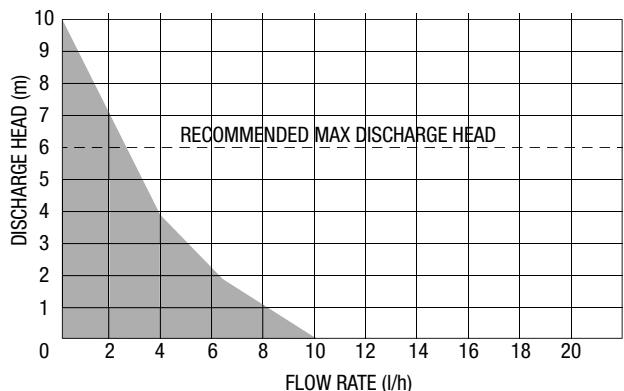

#### 4.14 PC - CONDENSATE PUMP

The condensate pump (with no-return valve) is necessary when the traditional water discharge is not allowed. It is supplied already mounted on the unit. The power of the pump is different for the different models where it has to be installed.

Functions:

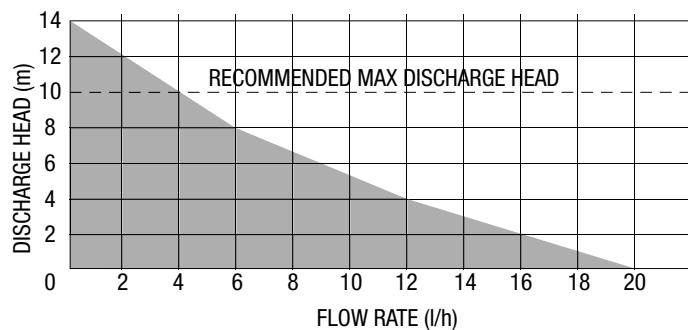

- forced evacuation of the condensed water.

PC Technical features for sizes 020 and 030

Max flow rate	10 l/h
Max suction head	2 m
Max discharge head	6 m
Electric power	18 W
Electric voltage	230 V~ 50/60 Hz
Alarm contact	NC 8 A - 250 V
Detection levels in mm	ON: 16, OFF: 11, Alarm: 19
Sound level at 1 m	25,1 dBA
Protection	IP20
Detection	remote
Thermal protection (overheating)	90 °C
Safety standards	CE
RhOS and WEEE directives	Complies

PC Technical features for sizes 040+070:

Max flow rate	20 l/h
Max suction head	3 m
Max discharge head	10 m (flow= 4 l/h)
Electric power	14 W
Electric voltage	230 V~ 50/60 Hz
Alarm contact	NC 8 A resistive - 250 V
Detection levels in mm	ON: 16, OFF: 11, Alarm: 19
Sound level at 1 m	< 20 dBA
Protection	IP20
Detection	remote
Thermal protection (overheating)	90 °C
Safety standards	CE
RhOS and WEEE directives	Complies

## 5. HYDRAULIC ACCESSORIES

### 5.1 J3B2 – ON/OFF 3-WAY VALVES WITH 4 WATER CONNECTIONS, 3/4", FOR 2 OR 4 PIPE SYSTEMS, 230V

The ON/OFF 3-way regulating valves with bypass are provided with thermoelectric actuator and connection tubes. The direct water flow is closed by not supplying power to the actuator. They are suitable for fan coils size 020÷050 and available also with 24V. They are always supplied loose together with their proper insulating shell.

### 5.2 J3C2 – ON/OFF 3-WAY VALVES WITH 4 WATER CONNECTIONS, 1", FOR 2 OR 4 PIPE SYSTEMS, 230V

The ON/OFF 3-way regulating valves with bypass are provided with thermoelectric actuator and connection tubes. The direct water flow is closed by not supplying power to the actuator. They are suitable for fan coils size 060÷070 and available also with 24V. They are always supplied loose together with their proper insulating shell.

### 5.3 J3BM – MODULATING (24V) 3-WAY VALVES WITH 4 WATER CONNECTIONS, 3/4", FOR 2 OR 4 PIPE SYSTEMS

The modulating 3-way regulating valves with bypass are provided with modulating actuator and connection tubes. The direct water flow is closed by not supplying power to the actuator. They are suitable for fan coils size 020÷050. They are always supplied loose together with their proper insulating shell.

### 5.4 J3CM – MODULATING (24V) 3-WAY VALVES WITH 4 WATER CONNECTIONS, 1", FOR 2 OR 4 PIPE SYSTEMS

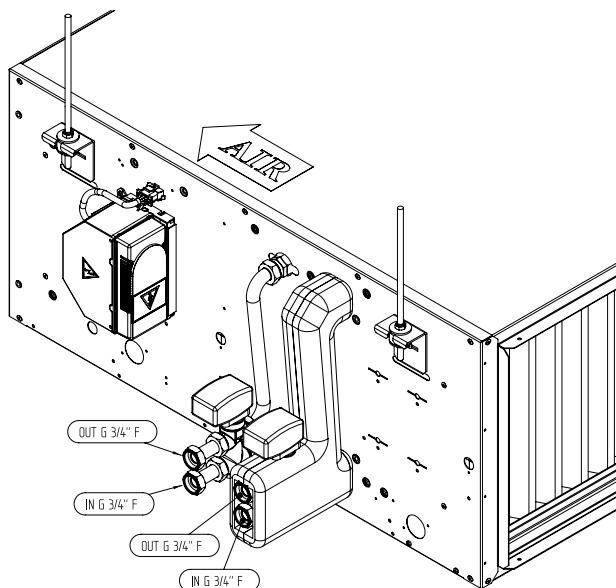

The modulating 3-way regulating valves with bypass are provided with modulating actuator and connection tubes. The direct water flow is closed by not supplying power to the actuator. They are suitable for fan coils size 060÷070. They are always supplied loose together with their proper insulating shell.

### 5.5 J2B2 – ON/OFF 2-WAY VALVES, 3/4", FOR 2 OR 4 PIPE SYSTEMS, 230V

The ON/OFF 2-way regulating valves with bypass are provided with thermoelectric actuator and connection tubes. They are suitable for fan coils size 020÷050 and available also with 24V (J2BM). They are not supplied with insulation shell. They need to be insulated on site.

### 5.6 J2C2 – ON/OFF 2-WAY VALVES, 1", FOR 2 OR 4 PIPE SYSTEMS, 230V

The ON/OFF 2-way regulating valves with bypass are provided with thermoelectric actuator and connection tubes. They are suitable for fan coils size 060÷070 and available also with 24V (J2CM). They are not supplied with insulation shell. They need to be insulated on site.

EBH with J3B2

### TECHNICAL FEATURES OF THE VALVES

Nominal pressure	PN16	Cod.: J3B2, J3BM, J3C2, J3CM, J2B2, J2C2, J2BM, J2CM
Fluid	Hot or cold water for HVAC system, according to VDI standard quality or equivalent	Cod.: J3B2, J3BM, J3C2, J3CM, J2B2, J2C2, J2BM, J2CM
Hydraulic connection	1" GF 3/4" GF	Cod.: J3C2, J3CM, J2C2, J2CM Cod.: J3B2, J3BM, J2B2, J2BM
Max close-off pressure	100 kPa 200 kPa	Cod.: J2C2, J3C2, J2CM, J3CM Cod.: J2BM, J3B2, J3BM, J2B2
Kvs	2,5 6,3	Cod.: J3B2, J3BM, J2B2, J2BM Cod.: J2C2, J3C2, J2CM, J3CM
Material	Brass	Cod.: J3B2, J3BM, J3C2, J3CM, J2B2, J2C2, J2BM, J2CM
Flow temperature limit	2÷110 °C	Cod.: J3B2, J3BM, J3C2, J3CM, J2B2, J2C2, J2BM, J2CM
Room temperature limit	2÷50 °C	Cod.: J3B2, J3BM, J3C2, J3CM, J2B2, J2C2, J2BM, J2CM
Actuator	On/Off Modulating	Cod.: J3B2, J3C2, J2B2, J2C2 Cod.: J3CM, J3BM, J2CM, J2BM
Operation Voltage	230 VAC ±10% 24 VAC/DC ±15%	Cod.: J3B2, J2B2, J2C2, J3C2 Cod.: J3CM, J3BM, J2BM, J2CM
Control signal	0÷10 Vcc	Cod.: J3CM, J3BM, J2CM, J2BM
Operation power	1 W 1,5 W	Cod.: J3B2, J3C2, J2B2, J2C2 Cod.: J3CM, J3BM, J2CM, J2BM
Running time	~ 4 min	Cod.: J3B2, J3C2, J2B2, J2C2
Protection grade	IP54 IP43	Cod.: J3B2, J2B2, J2C2, J3C2 Cod.: J2CM, J3CM, J2BM, J3BM

7

8

9

In order to choose the correct type of valve it is necessary to know the system's technical specifications; for this reason the consultant should take full responsibility for this choice.

MAXIMUM OPERATING PRESSURE WITH VALVES: 16 BAR.

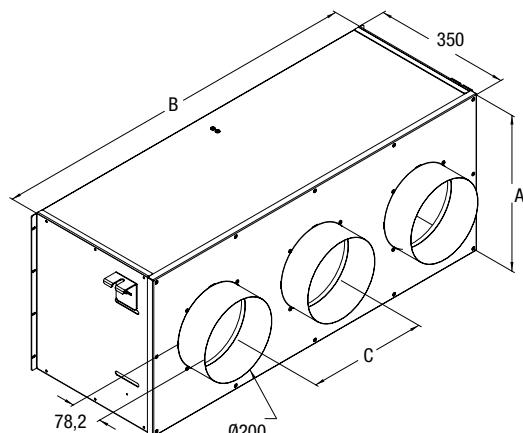

## 6. OTHER ACCESSORIES

### 6.1 PM – AIR DELIVERY PLENUM

The air delivery plenum is made of galvanized steel sheet, insulated inside with polyurethane foam, 12 mm thick, provided with spigots for the connection to the air ducts and with fixing supports. It must be installed on the air outlet of the unit.

### 6.2 PA – AIR INTAKE PLENUM

The air intake plenum is made of galvanized steel sheet, insulated inside with polyurethane foam, 12 mm thick, provided with spigots for the connection to the air ducts and with fixing supports. It must be installed on the air inlet of the unit.

B	962,6		1212,6		1607,6	
C	306,5		300		311	

### 6.3 FILTER F5

High filtering grade air filter consisting of a polyester acrylic fiber foam, filtration class F5.

Filter F5 (on request)

### 6.4 RAL PAINTING

The complete structure of the unit can be painted with oven dried epoxy powders. The standard colour is white (RAL 9001) but the full range of RAL colours is available upon request, with possible delays in the delivery time.

## 7.8 ELECTRICAL DATA

Electrical data refer to standard fan coils with clean filter and with 50 Pa of external static pressure. A dirty filter or an external air pressure drop will lower the absorbed power level. The installation of electric accessories increases the absorbed power level.

	Absorbed current [A]			Power input [W]			Power supply [V ph-Hz]
	max	med	min	max	med	min	
020	0,75	0,52	0,32	171	119 <sup>(E)</sup>	72	230-1-50/60 <sup>(2)</sup>
030	1,80	1,45	1,30	352	305 <sup>(E)</sup>	267	230-1-50/60 <sup>(2)</sup>
040	2,03	1,64	1,28	451	361 <sup>(E)</sup>	274	230-1-50/60 <sup>(2)</sup>
050	2,83	2,39	2,06	588	512 <sup>(E)</sup>	440	230-1-50/60 <sup>(2)</sup>
060 <sup>(1)</sup>	5,12	4,26	2,82	1007	897	603	230-1-50/60 <sup>(2)</sup>
070 <sup>(1)</sup>	7,90	7,22	6,46	1781	1617	1436	230-1-50/60 <sup>(2)</sup>

<sup>(E)</sup>: Eurovent

<sup>(1)</sup> Performances are out of scope Eurovent FCP.

<sup>(2)</sup> For the functioning at 60 Hz please use the Eurapo software for selection or verify with the Eurapo staff

## 7.9 WORKING OPERATION LIMITS

The EBH ducted unit can work correctly only if the following operational limits are respected:

- Max. operating pressure (water side): 1,6 Mpa
- Min. inlet cold water temperature: 5 °C
- Max. inlet cold water temperature: 20 °C
- Min. inlet hot water temperature: 35 °C
- Max. inlet hot water temperature: 85 °C.

2

3

4

5

6

7

8

9

In order to select the EBH ducted fancoil with calculating conditions differing from the standard ones or with DISTRICT COOLING coils, please use the EURAPO software for selection.

Note. Some units can present the risk of condensing water sprays if selected under particular calculating conditions in water temperature and relative humidity. In this case it is necessary to modify the calculating parameters or select a different EBH model.

Units size 060 and 070 can be used only with external static pressure >30Pa (060) or >040Pa (070). For a correct selection of the units, pls use the EURAPO software for selection.

## 8. SOUND LEVEL

The following sound levels are referred to EBH units with air delivery plenum with spigots, at 50 Pa external static pressure at medium speed.

				Lw	Lp
			EXT. STATIC PRESSURE (Pa)	DB(A)	DB(A)
1	020	max	Outlet Inlet + Structure	79 Pa	64,0 63,0
		med	Outlet Inlet + Structure	50 Pa	58,0 56,0
		min	Outlet Inlet + Structure	24 Pa	48,0 47,0
		max	Outlet Inlet + Structure	70 Pa	65,0 63,0
		med	Outlet Inlet + Structure	50 Pa	61,0 60,0
		min	Outlet Inlet + Structure	33 Pa	57,0 56,0
2	030	max	Outlet Inlet + Structure	78 Pa	69,0 67,0
		med	Outlet Inlet + Structure	50 Pa	63,0 62,0
		min	Outlet Inlet + Structure	32 Pa	57,0 56,0
		max	Outlet Inlet + Structure	60 Pa	72,0 70,0
		med	Outlet Inlet + Structure	50 Pa	68,0 66,0
		min	Outlet Inlet + Structure	37 Pa	65,0 63,0
3	040	max	Outlet Inlet + Structure	66 Pa	77,0 73,0
		med	Outlet Inlet + Structure	50 Pa	74,0 70,0
		min	Outlet Inlet + Structure	25 Pa	65,0 64,0
		max	Outlet Inlet + Structure	63 Pa	81,0 76,0
		med	Outlet Inlet + Structure	50 Pa	79,0 74,0
		min	Outlet Inlet + Structure	39 Pa	76,0 72,0
4	050	max	Outlet Inlet + Structure	60 Pa	61,0 59,0
		med	Outlet Inlet + Structure	50 Pa	52,0 51,0
		min	Outlet Inlet + Structure	32 Pa	46,0 45,0
		max	Outlet Inlet + Structure	60 Pa	69,0 67,0
		med	Outlet Inlet + Structure	50 Pa	63,0 62,0
		min	Outlet Inlet + Structure	37 Pa	57,0 56,0
5	060*	max	Outlet Inlet + Structure	66 Pa	61,0 59,0
		med	Outlet Inlet + Structure	50 Pa	52,0 51,0
		min	Outlet Inlet + Structure	25 Pa	46,0 45,0
		max	Outlet Inlet + Structure	63 Pa	66,0 62,0
		med	Outlet Inlet + Structure	50 Pa	63,0 59,0
		min	Outlet Inlet + Structure	25 Pa	54,0 53,0
6	070*	max	Outlet Inlet + Structure	60 Pa	70,0 65,0
		med	Outlet Inlet + Structure	50 Pa	68,0 63,0
		min	Outlet Inlet + Structure	39 Pa	65,0 61,0
		max	Outlet Inlet + Structure	63 Pa	70,0 65,0
		med	Outlet Inlet + Structure	50 Pa	68,0 63,0
		min	Outlet Inlet + Structure	39 Pa	65,0 61,0

\*Performances are out of scope Eurovent FCP.

Lw= Total sound power level

Lp= Total sound pressure level in open field at 1 m from the source

dB(A)= Sound level, weighted

## 9. ELECTRICAL CONNECTIONS

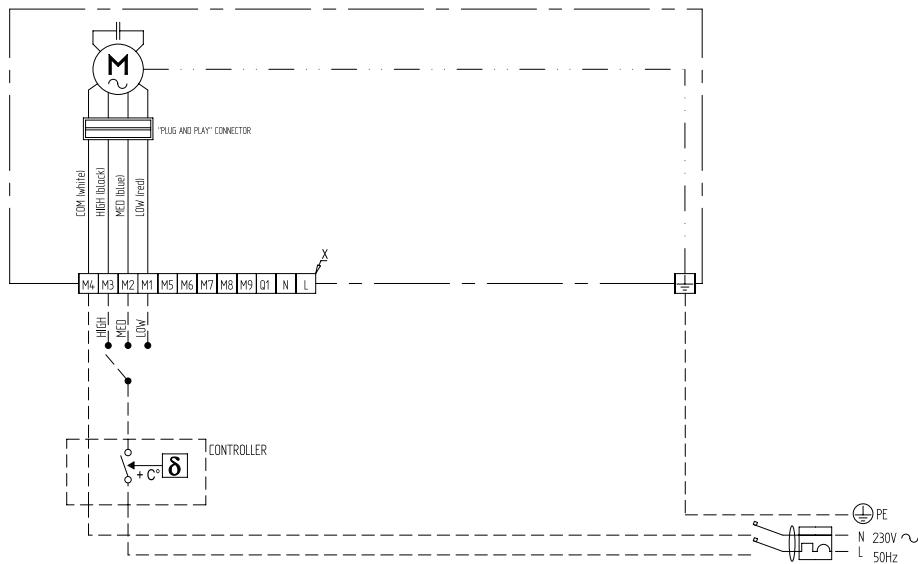

Most frequently used wiring diagrams:

### LEGEND (for all the electric diagrams)

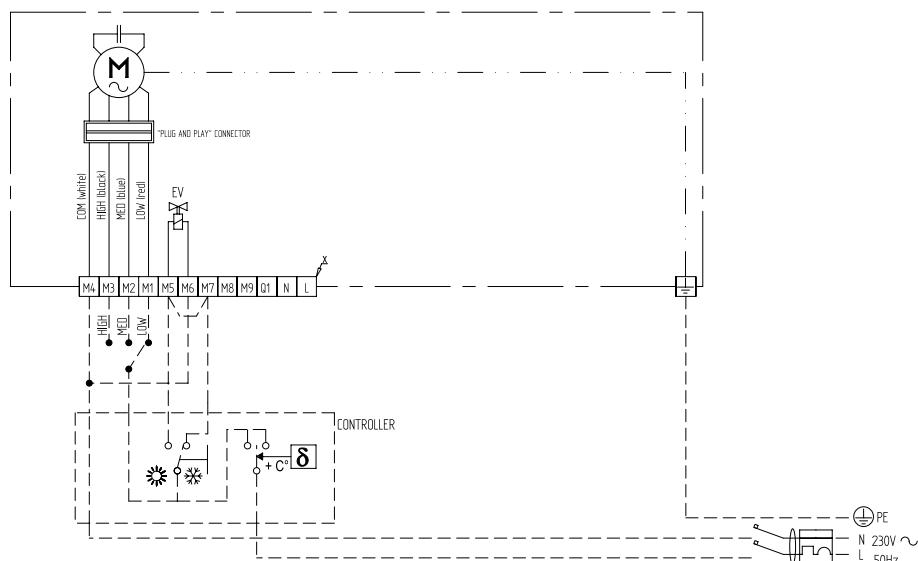

M	Fan motor
N	Neutral
L	Phase
PE	Earth
PR	Power Relay card

X	Terminal board
EV	Regulating valve: EVC for cooling; EVH for heating
PC	Condensate pump
 Summer/Winter switch
